

Westgate Pasadena

Pasadena, California

This 3-story mixed-use project in the historic downtown area of Pasadena includes 88 condominium units and 18,000 square feet of ground floor retail.

The upper two floors of residential units are grouped together within frames of white plaster that float above the glass-clad ground floor retail. The units within the white frames are clad in horizontal metal siding. The living room of each unit is recessed to create a terraced balcony and to add depth to the façade. Two-story loft units on the top floor occur at each corner of the complex and create iconic gateway elements at the street intersections. Designed by Christopher Coe. Executive Architect is Danielian Associates.
